

FEATURED CASE STUDY

Bringing People Together Through High-End AV Solutions

ENGAGE

A national food supplier came to us for a new, collaborative Corporate Headquarters. They were late in thinking about AV and needed something tailored to their office in Ohio.

DESIGN

- Townhall-style conference room that was big enough to fit 50 people and could split into 2 separate, smaller rooms
- Video conferencing capabilities
- Installed 13 displays with wireless connectivity

PARTNER

NATIONAL FOOD SUPPLIER

DELIVER

- Combine/Divide room that would be used for CEO town-halls and conferencing
- Standardized and simplified control of A/V technology
- Wireless shared collaboration in 16 separate rooms
- One button to push WebEx Meetings

DELIGHT

“...I wanted to personally thank all of you and your teams support, flexibility, and professionalism. As can be seen by this distribution list there were a lot of teams having to interact and be dependent on one another. All of you did a great job of working together. I am very happy with the results that each of your teams delivered. I will also share that I have received praises from several high-level people here...with how flawlessly this move went. Thank you again for all your efforts!”

THE STORY

Collaboration and connectivity are vital to the success of any company, especially when it comes to constructing and designing a brand-new corporate headquarters. A national food supplier came to ZeroDay with a challenge, and the team rose to the occasion and exceeded all expectations.

The customer has 100-150 employees in their Ohio office and knew that they needed an upgrade in order to continue and exceed the needs of their customers. With this in mind, along with a tight timeline, the ZeroDay team members knew exactly what needed to be done.

The outcome was a beautiful, state-of-the-art, townhall-style conference room large enough to hold 50 people. If necessary, the room has the capability to be split into two, smaller conference rooms. Whether in the big conference room, or one of the smaller ones, ZeroDay ensured that the use of video conferencing was seamless and intuitive with a one button push to initiate WebEx meetings.

In addition to the townhall conference room, the ZeroDay team also designed and installed 13 displays around the headquarters. All of these displays had wireless connectivity, allowing anyone with a shared Wi-Fi connection could easily utilize their features in 16 separate room.

Through this amazing partnership, ZeroDay was able to complete this project on-time, on budget, and far exceeded the expectations set by the customer.

“This project was definitely a great experience for myself and the rest of the ZeroDay team. We were able to procure all equipment and schedule the install to fit the customers very quick move in date. The Zero Day group was able to adapt to the changes requested by the architects and others involved in the project to deliver a fully standardized Audio Visual User Experience that will be used for many years to come. The vast knowledge of our Engineering and Programming team was overflowing during the duration of the project completion, and really helped the customer in determining their A/V needs.”
